You are invited to join us at the Maricopa Agricultural Center of the University of Arizona in Maricopa to see the long-term Tree Irrigation Study. Nine species of landscape trees have been irrigated with different treatments since 2010. Trees have not been irrigated since spring 2014. Learn about the experiment, observe how trees responded to the treatments, and find out which species can tolerate a growing season without irrigation.

For questions please contact Ursula Schuch at uschuch@email.arizona.edu
