

HealthySEAT -- Version 2 Update

1. Make sure that you know the location of the Version 2 back end database to which your installation of HealthySEAT is connected. If you are not sure, ask your HealthySEAT administrator, or go to Customize for District > Re-establish Database Connection, then make note of the path the right of "Currently Connected To:"
2. If you have any customized data in your back-end database (BE_HSEAT.mdb), make a back-up copy as an extra precaution. (Note: the new download will not overwrite your existing BE_HSEAT.mdb file but frequent back-up of your data file is always a good idea.)
3. Use your computer's Control Panel "Add or Remove Programs" feature to UNINSTALL HealthySEATv2. Uninstalling the older Version 2 is necessary before installing V2.002. To uninstall your existing Version 2:
 - a. Open the Windows Control Panel.
 - b. Select "Add or Remove Programs."
 - c. From the list of "Currently installed programs:" select the entry labeled "HealthySEAT Version 2" Click on the "Remove" button.
 - d. When asked "Are you sure...?" click on the "Yes" button.
 - e. After HealthySEAT Version 2 has been removed you should no longer see "HealthySEAT Version 2" listed under "Currently installed programs:".
 - f. Close the Add or Remove Programs window.
 - g. Close the Windows Control Panel.
4. Download the new Version 2.002 release from the EPA web site to your desktop.
5. Install the new Version 2.002 release using the same [installation procedures](#) as for Version 2.0.
6. When the Version 2.002 installation is complete, open HealthySEAT and re-establish the connection to your existing back end database. (Go to Customize for District > Re-establish Database Connection, click the Browse button, then locate the database noted in Step 1).

If you are still using HealthySEATv1, please download and install the new Version 2.002 release using the instructions provided in the User's Manual and on the HealthySEAT website to ensure that your Version 1 back end database is updated.
